

## News Release: Product Introduction JAN 2019

Southern Ballistic Research has introduced a new **M-Series Armor Piercing (AP)** cartridge. This new version is a Mod-2 (4 Gen) of the M-Series line, incorporating an improved tungsten carbide penetrator. The M-Series Mod 2 cartridges are manufactured to match specifications, and each cartridge is individually inspected to ensure the highest possible quality and round to round consistency.

Through the results of extension comparison test trails during development, the M-Series Mod 2 accuracy out preformed other leading AP ammunition manufacturers. In combination with match grade accuracy and the extreme penetration performance of the enhanced tungsten carbide core, the M-Series Mod 2 is an ideal choice for sniper applications against high threat targets.

338 Lapua Mag Shown

The **M-Series Mod 2 Armor Piercing (AP)** cartridge is identified by a black tip with a silver/gray ring, jacket body is copper.
